

## Double Door LED Cabinet Sensor

This double door led cabinet sensor is designed for use with Atlantic LED 24V drivers and LED strips. It can be surface mounted using the included bracket or drilled into the edge of cabinetry or millwork for a clean built-in look.

### Core Features

- Double Door LED cabinet sensor
- Works with both 12V and 24V
- For double-door cabinets; opening either door activates the lighting
- Flush mounted into the edge of cabinetry or surface mounted using the included kit

### Specifications

|             |                                                             |
|-------------|-------------------------------------------------------------|
| Voltage     | 12–24V DC                                                   |
| Sensor Size | Ø12 × 27mm                                                  |
| Wire Length | 2 × 200cm sensor wire, 20cm power wire, 20cm male connector |

|                            |                        |
|----------------------------|------------------------|
| Max Power                  | 12V <60W; 24V <100W    |
| Hole Size                  | 12mm                   |
| Included Mounting Hardware | 4 screws and 2 holders |

### Installation

Install the sensor on the low-voltage side of the system between the driver and the LED lights. It can be flush mounted into the edge of cabinetry or millwork, or surface mounted using the included mounting kit.

### Compatibility

Compatible with Atlantic LED's 24V lights, sensors, controllers and accessories.
